

# SecureVideo Command Center

SecureVideo™

The SecureVideo Command Center is an enterprise solution providing real time monitoring and switching of multiple incoming live video streams. The SecureVideo Command Center uniquely offers the capability to combine multiple feeds into a single switched stream for distribution. Switched streams can automatically be distributed to colleagues' mobile phones, desktop computers, laptops, and other web enable devices.

There are a variety of formats to select from such as: picture-in-picture, composite of 4 feeds at once, or 3 feeds and a map, among others. The SecureVideo Command Center includes a group map that can track the location of all video stream sources. It provides low latency viewing (1/2 second on average). When used with other SecureVideo enterprise solutions, Command Center offers live chat for instant communication between remote users.

**Master Video**  
Switched master stream. Send selected video to authorized personnel using Share feature.

**Stream Selector**  
List of available streams automatically searches for live streams.

**"On Air" Feed**  
The preview feed with green border is sent to master stream. Switch feeds by clicking on preview video window.

**Real-Time Diagnostics**  
Dynamic display of connectivity, bit rate, frame rate, time to server, GPS status, and AV status.

**Group Map**  
Shows the location of all live streams within a selected group. Updated every frame.

**Live Chat**  
Back channel message system. Messages sent, go to all active previews. Authorized field personnel can view & respond.

**Share**  
Send notification message with links to authorized personnel. They can view on phones or computers.
