

SecureVideo App

The SecureVideo App allows you to stream live video from your mobile phone to anyone connected to the web. Authorized viewers can watch on a phone or computer. Live streams are automatically archived on a secure server.

Auto-share your live stream to your contacts via SMS and email. The SecureVideo App integrates with all SecureVideo enterprise applications enabling low latency viewing.

Stream Statistics

When a live video stream begins, a status message is displayed, along with streaming statistics (frames per second, bit rate), and GPS status.

Privacy

SecureVideo stream can set to private or public by clicking on the lock icon.

Share

Share feature allows sharing live feed with authorized contacts via SMS, email or social network.

Start/Stop

Select Start/Stop button to begin and end live feed.

Live Chat

Live Chat is available when streaming. Messages can be sent to and receive from authorized viewers in real-time. Messages are time-stamped and display sender's name.

Settings

Default settings for video streaming can be adjusted from this screen, such as: type of streaming, audio mute, camera option, resolution and location.

Video Info

Video info is the screen where title, tags, description and other metadata can be entered before streaming information can be edited after the video is saved, by logging into your online account.
